Skills

- Python, Go, Java, JavaScript, SQL, C
- Linux, Git, AWS, Docker, Kubernetes, Azure, Claude Code, DynamoDB

Work History

Software Engineer, 10/2021 to 01/2026

Trend Micro – Austin, TX

- Maintained proper functioning of Trend Micro ZTSA infrastructure
- Maintained ETL pipelines and databases in the ZTSA backend, resolving data integrity and performance issues
- Implemented the backend part of several new features in ZTSA
- Diagnosed and resolved complex customer issues by analyzing logs and tracing failures across distributed systems
- Designed and implemented RESTful APIs for internal services and customer-facing product features
- Designed and maintained cloud infrastructure

Research & Development Intern, 06/2021 to 08/2021

Trend Micro – Austin, TX

- Collaborated on a four-person team to build a web app that dynamically visualizes AWS account assets and their relationships as an interactive graph in the browser.

Projects

- Built a Python library for efficient numerical algorithms mostly dealing with matrices and finding numerical solutions to differential equations.
- Built an empire building strategy game in Python using PyQt6 with an interactive world map and simulated international trade and wars.
- Helped build an AI interview platform that generates interview questions and simulates a job interview based on a resume and job description

Education

Bachelor of Arts: Mathematics

University of Oklahoma - Norman, Oklahoma

- Minors in Computer Science and Physics
- GPA: 3.83

Awards

- 3-time Texas High School State champion in Mathematics
- National Merit Scholar
